CURRENT RESEARCH SUPPORT

2006-2010 NCI (PI: Rebecca E. Lee, PhD)
 Co-Investigator on a study designed to determine whether (1) a 24 week social cohesion intervention is more effective for adopting walking for leisure exercise and transport in comparison to a dietary habit control group; (2) walking is more effectively maintained by participants who reside in highly supportive neighborhoods in comparison to those who reside in low supportive neighborhoods; and (3) this effect is transculturally replicable across two racial/ethnic groups from two cities (African American women in Houston, TX; Latinas in Austin, TX).

2006-2009 RWJF (PI: Paula Braveman, MD, MPH)
 Co-Investigator on a grant to develop an initiative featuring an RWJF Commission on Health Equity. The initiative depends on close collaboration between RWJF staff from multiple teams: a core group of researchers based at the Center on Social Disparities in Health (CSDH) at the University of California, San Francisco (UCSF), with key collaborators and scientific advisors at other institutions; and communications consultants. The primary goal of the initiative is to raise awareness and stimulate debate among the public and policy-makers about reducing socioeconomic gaps in health in the United States, bringing out the links between race/ethnicity and social class as they affect health.

2001-2007 NIEHS/NHLBI (PI: Marilyn Winkleby, PhD)
 Co-Investigator on a project to test the independent and interrelated effects of the neighborhood

social environment (e.g., neighborhood SES, social disorganization, Hispanic concentration, crime rates), neighborhood physical environment (e.g., housing conditions, availability of goods and services such as licensed alcohol distributors, fast food restaurants, grocery stores; educational resources, recreational facilities; banking/lending institutions), and individual risk factors in predicting all-cause and CVD mortality in women and men.

 Teaching Assistant, Introduction to Health Policy and Management, The Johns Hopkins University School of Hygiene and Public Health, 1995, Instructor: Donald Steinwachs
 Teaching Assistant, Health Care for Vulnerable Populations, The Johns Hopkins University School of Hygiene and Public Health, 1995, Instructor: P. Ellen Parsons

DESCRIPTION OF RESEARCH PROGRAM/INTERESTS

- Applying epidemiological methods in order to better understand social inequalities in health, particularly those relating to socioeconomic and racial/ethnic inequalities in health in the U.S.
- Specific concerns include investigating how neighborhood environments (e.g., residential segregation, availability of goods and services) may explain social inequalities using contextual analytic methods for the purpose of informing policy.
- Expertise in the conceptualization and measurement of socioeconomic status/position and how that conceptualization and measurement affects the interpretation of racial/ethnic disparities in health.
